

Validate Your Expertise in Identifying and Responding to Cyberthreats

Cybersecurity analysts are critical to protecting organizations from cyberattacks and safeguarding sensitive information. Professionals who earn the **Certified Cybersecurity Operations Analyst™ (CCOA™)** certification, brought to you by the creators of the globally recognized Certified Information Security Manager® (CISM®), will gain a deep understanding of identifying and responding to cyberthreats and performing vulnerability assessments, as well as industry best cybersecurity practices. Leveraging applicable modern technologies, CCOA learners will develop skills through hands-on training that places them in a lab environment where they will develop techniques they will use on the job.

Who should get certified?

Cybersecurity professionals with 2-3 years of experience looking to enhance their technical skill set and address cybersecurity challenges more effectively. CCOA is an especially valuable credential for early-career security professionals looking to one day attain their CISM.

Why should you get a CCOA credential?

Breaking into cybersecurity can be difficult for those without years of experience. CCOA enables certification earners to demonstrate that they can analyze, detect and respond to threats effectively. Through practical exercises and strategic approaches to ensuring confidentiality and integrity in information systems, professionals who earn a CCOA validate that they have essential cybersecurity skills and knowledge, helping them excel in cybersecurity roles and advance their careers.

What is industry growth potential?

A well-documented shortage of qualified cybersecurity professionals remains a challenge globally, and according to the [US Bureau of Labor Statistics](#), demand for cybersecurity professionals is expected to increase by more than 35% over the next decade.*

An opportunity for future advancement

Exam passers will earn a one-year educational waiver toward obtaining their CISM credential.

“When I heard about ISACA’s CCOA certification, I thought, ‘There’s finally something with a hands-on element and not just theoretical questions. The labs are a game-changer—this is a credential that is very appropriate for its time.’”
